

Kampa[®]

Caravan Awnings 2017

There's a Kampa awning for everyone

No-one has more experience of lightweight awnings than Kampa. The creator of the Kampa range was responsible for the very first lightweight awnings in the UK and for many of the designs available in the market today across Europe.

We understand that your awning is an important extension to your caravan and you would like the same quality, design and ease of use that your caravan gives. You want an awning you'd be proud to attach to your caravan and that provides first class accommodation on site, yet remains amongst the easiest of awnings to set up and dismantle whilst being structurally the most secure.

Our newest innovations bring you the very latest enhancements to ensure that Kampa awnings stay ahead of the pack. Our bestselling awnings are continually developed to ensure that they offer the best in design, materials and function and that they remain the finest available.

All Kampa lightweight awnings feature sewn in sealing bumper pads to create a seal between awning and caravan; this can be further improved by using the optional rear pole sets and the innovative new Limpet system that attaches the rear of the awning to your caravan. The awnings are made from attractive heavy duty materials - we invite you to 'feel the difference'. All awnings come complete with a draught skirt, fully adjustable pegging points, pegs, instructions and a large compression bag that you can easily pack the awning back into!

For 2017 we have several new awnings. Take a careful look at our two Classic AIR Expert models, it's hard to spot that these are inflatable – they have the look, materials and feel of a classic awning with the ease and security of our one-point inflation system. Also new, for those who like a bit of space, is the Rally AIR Pro Plus. This has a large integrated annexe and can be ordered in left hand or right hand versions. Our new flagship model, the Frontier AIR Pro, is our largest ever awning yet it is easy to inflate like all our AIR models.

Frontier AIR Pro

Our new flagship model, based on the Ace AIR. No other inflatable awning has ever offered this much space.

Page 8

Fiesta AIR Pro

Elegant style with the option of a zip on canopy and an annexe on either side, all in our fantastic Pro fabric. Available in 280, 350 and 420 sizes.

Page 16

Rally Pro

An incredibly high specification awning that includes zip out side panels that you can zip into an optional annexe. Available in 200, 260, 330 and 390 sizes.

Page 24

Classic AIR Expert

For those who hanker after traditional styling but want the ease of the Kampa one-point inflation system. Available in 300 and 380 sizes.

Page 10

Rally AIR Pro

Europe's best selling inflatable awnings. Look out for the new look 390 model; there's a size to suit all caravans and needs. Available in 200, 260, 330 and 390 sizes.

Page 18

Ace AIR Pro

Europe's most sought after awning. This updated model makes it even more desirable. Available in 300, 400 and 500 sizes.

Page 12

Pop AIR Pro

Essential extra space for pop-up caravans – the Pop AIR is the first purpose-made inflatable awning. Available to fit the Eriba Touring range but also suits other pop-up caravans.

Page 20

Rally AIR Pro Plus

All the great features of our best-selling Rally AIR Pro but with a large built-in side extension. Perfect for storage, sleeping, living and as a wet weather entrance. Available in a 390 size.

Page 14

Ace

The ultimate in lightweight poled awning design. The Ace is a stylish addition to your caravan and provides loads of fantastic living space. Available in a 400 size.

Page 22

Rally

The famous Rally in its updated format is now even better value than ever. The same great design and quality at truly competitive prices. Available in 200, 260, 330 and 390 sizes.

Page 26

Kampa AirFrame Awnings

The future in your hands

After years of development and having sold tens of thousands across Europe, Kampa AIR awnings have revolutionised caravanning. Gone are the traditional metal or fibreglass poles, replaced by strong, high pressure inflatable AirFrame poles. No more struggling with the awning frame and trying to find the correct pole, the AirFrame is already attached to the awning for simple, one step set up.

So how does it work?

It's simple - traditional poles have been replaced with an inflatable AirFrame that is always attached to the awning. The individual poles are linked together so that you can pump at just one single point and inflate the entire awning. The rigid AirFrame creates an exceptionally strong awning, probably stronger than a steel frame. It can be inflated using the supplied high volume manual pump or, for the ultimate in ease, with an optional electric pump. A Rally Air 260 can be pumped up in less than 60 seconds using the manual pump.

What's the set up procedure?

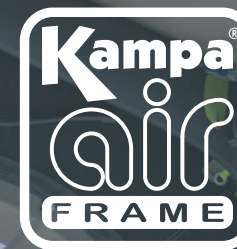

It's never been easier, just follow these simple steps:

- 1) Thread the awning onto the awning rail of your caravan. Kampa AIR awnings are lightweight making it much easier than a conventional awning and all Kampa AIR awnings have zip out panels that can be removed to reduce the weight still further.
- 2) Peg down the four corners of the awning.
- 3) Attach the pump to the inflation point and pump until inflated - The tubes are high pressure so you can't over-inflate with the pump supplied or with our optional electric pump.
- 4) Peg down the intermediate pegging points and guy lines.

That's it! The easiest awnings ever.

Other advantages

- As well as being the easiest awnings to set up, they're also the easiest to take down.
- Kampa AIR awnings are lighter than awnings with conventional poles.
- A Rally Air 390 is up to 27% lighter than an equivalent awning which reduces your payload.
- With no metal or fibreglass poles there's nothing to damage your caravan. Soft AirPoles rest against your van with no other attachment.
- The AirFrame is always attached -you're never going to forget or lose your poles.
- Whilst the AirFrame is very rigid it does flex in the wind, meaning that you'll never break or bend a pole.
- The AIR awnings are made with class leading materials and are produced by skilled craftsmen.

* see website for details

What happens if the AirFrame is damaged?

The AirFrame is incredibly durable and under normal conditions will not fail. Each AirPole is made of a strong TPU inflation tube that is zipped into a tough reinforced PE cover. This is then zipped into a heavy duty polyester sleeve in the awning. The inflation tubes are well protected and need no maintenance. Ideal operating pressure is between 8 and 12 psi and the poles are tested to 22 psi, a pressure that is not possible to reach using either the supplied pump or the optional electric pump. They are not effected by extremes of temperature - they have been tested in Arctic and tropical climates and we sell to Iceland and Australia. Should one of the AirPoles be damaged, each AirPole can be isolated from neighbouring poles using the isolation valves. A repair to the AirPole or replacement can then be made in a matter of minutes. Damage to a single AirPole may not make the awning unusable.

Why buy a Kampa AIR awning?

Since we launched our first AIR awnings in 2013, tens of thousands of caravanners have joined the Kampa revolution and no longer fear setting up their awning. It's not surprising that other brands want to imitate our success. We've seen an influx of "inflatable" product enter the market, often copying our designs. So, what do these new contenders bring to inflatable awning design? The answer is nothing. How have they improved on design and function? The answer is they haven't.

The foremost reason for buying an inflatable awning is easy set up. No awning is quicker or easier than a Kampa AIR. All Kampa AIR awnings inflate from just one external inflation point. That's one inflation point from where the whole awning is inflated including all supporting AirPoles and beams - there's no additional poles to inflate and insert - the whole awning inflates through the one valve.

Kampa AIR awnings are the only awnings where all the poles are linked - all the poles inflate together using a patented system. On some other brands each of the poles are separate and need to be pumped up individually. Can you imagine having to inflate up to ten individual poles? Frankly it's quicker and easier to set up one of our conventional poled awnings.

Kampa AIR awnings do not need any additional support poles, either inflatable or conventional. Some brands require fibreglass or metal poles to support them - why bother? Our conventional poled awnings will be as quick to set up. On other awnings you need to inflate additional tubes and then attach them to the inside of the awning with velcro - this will take even longer and is all a bit low tech. Kampa AIR awnings have their inflation point on the outside of the awning making it very easy to pump up.

Kampa AIR awnings have quick release deflation valves - there's no need to unscrew the inflation valve and this deflates the whole awning. How long will it take to undo and deflate ten individual poles?

Before purchasing an inflatable awning insist on a full demonstration - from deflated to fully inflated making sure that all poles are pumped up. Then ask for it to be fully deflated!

There are many other reasons to purchase a Kampa AIR awning:

- Kampa are the pioneers in inflatable awning technology. We're the market leaders and have extensive knowledge and experience.
- The people behind Kampa awnings have over thirty-nine years of continuous expertise in awnings and awning design.
- Kampa are the world leader in lightweight awnings.
- Kampa AIR awnings have an ideal inflation pressure of between 8 and 12 psi and have been tested to 22 psi. This is substantially higher than other inflatable awnings and ensures that Kampa AIR awnings are the strongest and most stable available - they make other awnings look wobbly. Kampa AIR awnings have been fully tested. This ensures good design with adequate run-off whilst at the same time ensuring internal clearance for the caravan door. All of our designs spend hours in a rain room ensuring that a Kampa AIR awning will not let you down.
- Kampa has the widest range available. For 2017 we have nineteen different AIR awnings available to suit your requirements and budget.
- Kampa AIR awnings have reassuring quality - they're not a gimmick but cutting edge awning technology.
- Kampa AIR awnings can be customised with a range of optional equipment including different types of carpet, roof linings and our fantastic Sabre Link lighting system.

New and improved materials for 2017

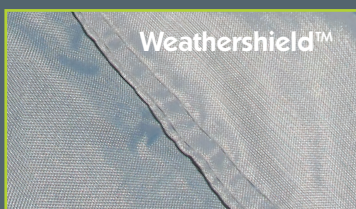

For the 2017 season we have introduced new fabrics and materials and made improvements to existing fabrics.

Our latest Expert materials are used on the new Classic models. The roof and walls are breathable, ensuring a comfortable climate inside the awning with less risk of condensation. The walls have a great textured feel and are extremely durable.

Our favourite fabric that we use extensively throughout the range, it has proved itself time and time again. For 2017 we've made improvements to the UV protection and the coatings to make sure that Weathershield™ Pro continues to be market leading.

Durable and extremely weather resistant, this material's been protecting caravanners since 2008. For 2017 we've improved the coatings to make it even better.

More reasons to buy a Kampa awning

◀ Kampa awnings have upright front wall panels allowing full use of the interior space. The front headroom is exceptional allowing an unobstructed view out. Kampa awnings have a generous depth.

◀ Large, Crystal Clear windows ensure a great view out. All windows come with internal blinds or curtains, on easy-slide track for privacy.

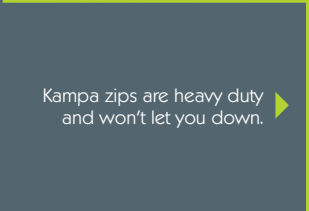

◀ The easiest set up. Whether it's inflatable or poled, Kampa awnings are the easiest to set up. The whole operation can be achieved in minutes, with a minimum of fuss.

◀ Our awnings have strong mudwalls with integral eyelets to keep out draughts.

▶ Zip-out panels reduce the weight you have to pull through the awning rail (minimum awning weight).

▶ Kampa zips are heavy duty and won't let you down.

NEW

▶ For the 2017 season we are introducing our new easier to use Downdraught pump. The new pump is taller so you don't need to bend as far and, because it only works on the down stroke, it requires a lot less effort – you'll certainly notice the difference. The pump has more comfortable hand grips and a built in pressure gauge, so you'll know when you've reached the correct pressure. We're including this pump with all our inflatable awnings.

▶ Kampa awnings can be customised with the widest range of optional equipment including organisers, mesh panels and roof linings.

So simple to set-up!

Kampa[®] PRO

FRONTIER AIR

- space and elegance

The ultimate inflatable awning and our new flagship model. If it's space that you require then the Frontier will meet all your requirements as it's one of the largest awnings available. The Frontier is eight metres wide, yet it only needs a caravan with a horizontal awning rail of just over four metres, and the depth is an impressive three metres. As with all Kampa AIR awnings, the Frontier is inflated through a single inflation point and the three front panels can be removed to make it easier to thread the awning onto the caravan. Once set up you can revel in the large open inside space with loads of room for furniture and all your other caravanning equipment. All three centre panels can be zipped down, veranda style, or completely removed. You can even replace them with mesh panels for those hot days when you want to keep the insects out. Each of the end extensions has its own front door and a window in the rear panel so, if the extension covers your caravan window, you can still see out into the awning. The rear panels also have zipped access for any lockers behind them.

Windows in both rear panels allow a clear view out of the caravan.

Kampa® EXPERT CLASSIC AIR

- classic good looks, so easy to set up

The inflatable awning that doesn't look like an inflatable awning! Don't be deceived by its traditional good looks, this awning is inflated like any of our other AIR awnings from just one inflation point. This makes it quick and easy to set up yet it could be mistaken for classic Danish design. The Classic AIR showcases our latest Expert Weathershield™ materials that offer superb protection but are also breathable. The front and side panels can be removed to make set up easier and, if the side door is obstructed by the caravan step, the side panels are interchangeable - you can swap them around so that the side doors are at the front of the awning. The Classic AIR has a small front canopy that is supported by a lightweight aluminium frame that takes seconds to set up. The awning can be customised to suit your needs with the usual Kampa options such as furniture, roof lining, organiser and for the first time we are offering a tall annexe and our exciting Conservatory, an ideal place to settle down with a book on those days when it's not warm enough to sit outside.

Kampa[®] PRO ACE AIR

- perfect from all angles

Europe's most sought after awning and for 2017 we've made some small improvements to make it even better. The Ace AIR offers such style whilst still being completely functional - you're certain to be the envy of the caravan park. Everything we know about awning design is incorporated within this model - that's thirty-nine years of continual awning design. The shaped front panels not only look good but provide extra interior space with a depth of 300 cm. Moving inside the awning, the view out is spectacular with large panoramic windows and skylights providing plenty of light during the day and a view of the stars at night.

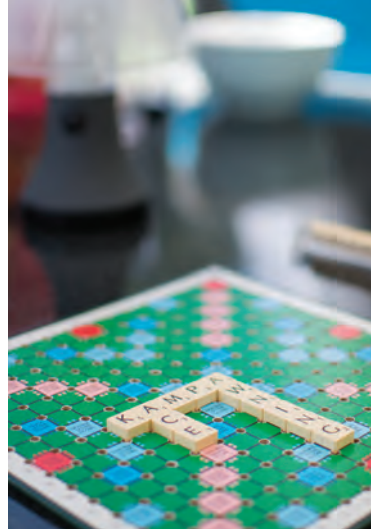

The windows all have curtains on easy run track. All the panels can be zipped out of the awning or lowered at the top and used 'veranda' style. Furthermore, an optional annexe can replace either of the side panels - or both. The Ace AIR uses our Pro Weathershield[®] Pro material which looks stunning on your caravan and is durable and weather resistant.

If weight is an issue the wall panels can be removed so that it's only necessary to feed the roof through the awning rail and then simply zip the panels back in.

The Ace AIR is available in 300, 400 and 500 sizes and these can be complemented by the spectacular Sun Wing that is available for each of the sizes.

PRO

RALLY AIR PLUS

- when you need more room

All the features and functions of our Rally AIR Pro with a bit more space. The side extension is particularly useful - it can be used as a wet weather entrance or somewhere to kick off your shoes. Alternatively, for storage as somewhere to park the bikes or house outdoor furniture or simply for extra living space when you're entertaining. It could also be used for extra sleeping accommodation, with the optional inner tent, when you've got guests. You can choose how you use this versatile space. The awning can be left divided or you can remove the side panel to open it up as one large area.

The Plus has all our latest features including the ability to accept mesh front panels and our Limpet System. The extension is inflated at the same time as the rest of the awning through the single inflation point making it as easy to set up as the rest of our awnings. If the extension covers a caravan window you can open a flap on the rear panel to reveal a window, allowing unimpeded access into the awning from the caravan and there's zipped access to any lockers that may be behind the extension. The Plus is available in left and right versions (looking at the front of the awning).

Kampa® PRO

FIESTA AIR

- the most versatile inflatable awning

If you're looking for an awning that will adapt with your needs, then look no further than the Fiesta AIR Pro. This stunning looking awning not only offers flexibility on the way the front and side panels are used but can also be fitted with exciting options such as the front sun canopy and an annexe. As its name suggests, the Fiesta AIR Pro uses our exclusive Weathershield™ Pro material in combination with our patented inflation system to make one of the most desirable awnings on the market - the Fiesta AIR Pro is one of our bestselling awnings. Available in a range of useful sizes - 280, 350 and 420, there's bound to be a model that suits your needs and caravan.

Both the front and side panels can be completely zipped out and the side panels can be replaced with the optional annexe. As with all Kampa awnings, set up is very simple and exceptionally quick, as the Fiesta features the same one-point inflation system as the rest of our inflatable awnings. Both side panels are interchangeable, and one has a large mesh ventilation panel. The optional canopy simply zips onto the front of the awning and is supported with strong aluminium poles. There is a canopy to suit each size.

RALLY AIR

- updated version of our bestselling favourite

The Rally AIR Pro is quite simply the bestselling inflatable awning in the world. This updated Series 4 version brings even more features and makes sure that the Rally AIR Pro remains market leading. This is a full function awning; we've thought of everything. Interchangeable zip out side panels allow the fitting of an annexe and the reversal of the side doors – from the back of the awning, to the front. For 2017 we've completely redesigned the 390 model, giving it a clean new look and faster inflation. All the Rally AIR Pro's can now be fitted with optional front mesh panels, giving loads of ventilation whilst keeping the bugs out. The 2017 models are also ready to accept our Limpet System – an ingenious method of attaching the side walls to the caravan.

The Rally AIR Pro uses our fantastic Weathershield™ Pro material for excellent weatherproofing and long life but is still light enough for easy set up and handling.

Available in 200, 260, 330 and 390 sizes.

Kampa[®] PRO POP AIR

- for Eriba Touring and other pop-up caravans

The inflatable awning solution for your Eriba caravan. Now you can have a Kampa inflatable awning that is easy to set up and gives you valuable extra living space. There are four sizes specifically designed to fit the different sized Eriba Touring caravans but these will also fit other pop-up caravans depending upon their height and length. The Pop awnings have a clever dual height system that means that they will fit pre and post 2010 models (260 Puck model only pre 2010).

The Pop design is based on our Fiesta AIR design and it shares many of the features including the zip out front and side panels. The rear of the awning has an extra inflatable tube that raises the centre height making it a full height awning with plenty of headroom and light airy feel. The Pop has plenty of windows, for a great view out, and closable mesh panels provide ventilation when needed.

Due to the design of Eriba caravans and the fitment of the awning, we recommend the use of an Eriba Weather Protection Strip. This simply clips to the caravan gutter and prevents rain running into the gully between the caravan and awning. It is available as optional equipment.

Available in four sizes.

Why buy a framed Kampa awning?

Although they are becoming increasingly popular, we understand that not everyone wants an inflatable awning. Kampa pioneered premium quality poled awnings and they quickly became the bestselling awnings of their type.

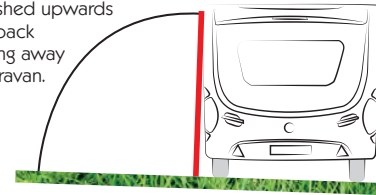

There's a Kampa poled awning to suit most budgets from the original Rally through to the Ace - would you really want anything less on your caravan? No other lightweight awnings are so advanced in their design and quality or as easy to set up as a Kampa.

These conventionally framed awnings are unique in offering adjustable front legs, these are absolutely essential to ensure a good fit between your awning and caravan. The diagram explains why your awning should have adjustable legs.

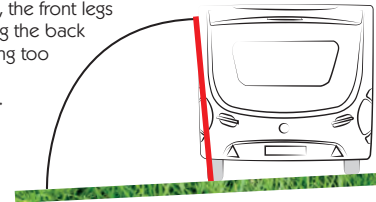

Awning without adjustable legs

When the ground slopes upwards away from the caravan, the front legs are pushed upwards pulling the back of the awning away from the caravan.

When the ground slopes downwards away from the caravan, the front legs drop making the back of the awning too close to the caravan.

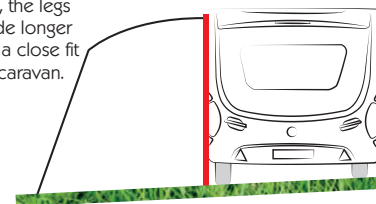

The advantage of adjustable legs on the Rally

When the ground slopes upwards away from the caravan, the legs can be made shorter maintaining a close fit against the caravan.

When the ground slopes downwards away from the caravan, the legs can be made longer maintaining a close fit against the caravan.

- a new twist

As well as inflatable technology, Kampa are at the forefront of conventional awning design. The Ace showcases all that's best in lightweight awning design and function. The Ace, like all Rally awnings, is easy to set up - it is no more difficult than our smaller models. The awning is 400 cm wide and a very generous 300 cm deep - big enough for an extended holiday and an ideal replacement for a full awning. All five panels can be zipped out and an optional annexe can be zipped into either side.

The view out is amazing, through the skylights in the roof and the large panoramic windows. Unusually, for a lightweight awning, the Ace comes with conventional curtains that gives an impression of sheer elegance. The Ace is designed to accept all our latest options including a roof lining and the accessories that attach to the fitted AccessoryTrack™. To keep the payload down the frame is manufactured in aluminium.

Available in 400 size

Ace 400	400 cm	300 cm	100 x 45 x 32	24.6 kg
Rally Pro/Ace Annexe	160 cm	220 cm	65 x 19 x 19	6.8 kg

Kampa® PRO RALLY

- for the most discerning

For the discerning caravanner who demands the finest lightweight awnings we have combined the superlative features of classic and lightweight awnings to produce a hybrid that gives you the best of both worlds. The awning is produced in extra high quality Weathershield™ Pro material that looks and feels like traditional material but has all the benefits of modern technology.

The Rally Pro remains exceptionally easy to set up using steel poles throughout for extra strength and retains the unique adjustable front legs to ensure a perfect pitch every time. We've made improvements to the latest models to ensure that the Rally Pro remains the best lightweight awning available and the Rally Pro is available in a striking Grey/ Charcoal colour combination.

The look is complemented by the curtains, for both the front and side windows, that slide on easy run track. There's a Rally Pro to suit all caravans and purposes, whether it's the 200 for a quick weekend away or a 390 for an extended holiday. Whichever size you choose you can be sure that it's quick and easy to set up.

The zip out side panels offer even more flexibility and also allows an optional annexe to be zipped into either side - or both sides. The annexe is also simple to set up and comes complete with an inner tent. It makes excellent additional accommodation or can be used as extra storage.

The Rally Pro can be customised with our range of optional equipment which includes the organiser and hanging rail that can be attached to our AccessoryTrack™ fitted to all Rally Pro awnings.

Available in 200, 260, 330 and 390 sizes

Rally Pro 200

Rally Pro 260

Rally Pro 390 with optional annexe

Rally Pro 330

Model	Width	Depth	Pack Size cm	Weight
Rally Pro 200	200 cm	250 cm	75 x 31 x 31	15.8 kg
Rally Pro 260	260 cm	250 cm	80 x 31 x 31	21.6 kg
Rally Pro 330	330 cm	250 cm	85 x 31 x 31	23.5 kg
Rally Pro 390	390cm	250 cm	80 x 33 x 33	24.9 kg
Rally Pro/ Ace Annexe	160 cm	220 cm	65 x 19 x 19	6.8 kg

Suitable for caravans between the height of 235 - 250cm

Kampa® RALLY

- the original
and still the best

The awning that started it all and spawned all other Kampa awnings. Its DNA can be seen throughout the range. This is the latest format, available in four very useful sizes. The compact 200, so useful for weekend and overnight stays but still large enough for a table and a couple of chairs. The 260 can fulfil the needs of the weekend or touring caravanner but could equally suffice for longer holidays. The 330 with its large panoramic windows that is no more difficult to set up than its smaller siblings. And the full size 390 that can house a family and can be used as a replacement for the traditional awning without the hassle. Whatever the size, they're all incredibly quick and easy to set up with the majority of the work done from the outside of the awning. As with all Kampa awnings, the Rally is made from premium materials that will not let you down and looks great on your caravan. It's as quick to dismantle and packs down into an oversized carry bag with compression straps.

Available in 200, 260, 330 and 390 sizes

Rally 200 with optional canopy pole kit

Rally 260 with optional Storm Tie Down kit

Rally 390

Rally 330

Model	Width	Depth	Pack Size cm	Weight
Rally 200	200 cm	250 cm	75 x 27 x 27	14.7 kg
Rally 260	260 cm	250 cm	80 x 29 x 29	18.5 kg
Rally 330	330 cm	250 cm	85 x 30 x 30	20.5 kg
Rally 390	390cm	250 cm	80 x 32 x 32	23.6 kg

Suitable for caravans between the height of 235 - 250cm

Shade - a simple but effective sun canopy

Quick and easy to set up, the Shade provides protection against the sun. It comes complete with front and side mesh screens that act as windbreaks and offer a little more privacy without stopping the view out. The front and sides can be rolled up and stowed if required.

Shade specification

- **'Feel the Difference'** 210D polyester
- Adjustable steel frame
- Roll up front and side mesh panels
- 4mm and 6mm Keder beading
- Suitable for caravans and motorhomes up to 260cm

SabreLink™ - the effective lighting solution for your awning

An exciting new accessory for your awning, the SabreLink™ lighting system ensures you're never in the dark. The system allows you to link up to three lights together - that's 450 LED's. Each of our AirFrame awnings is SabreLink™ ready and can accept lights on the front AirPoles and also the centre poles. An Ace AIR 400, for example, could have three lights along the front and another three in the centre. Each system is controlled using a remote control that allows you to switch the lights on and off and also dim and brighten them. In our poled awnings the lights can be hung from the horizontal poles using the 'S' hooks provided.

Sabre LINK™
SYSTEM

SabreLink™ Specifications

- Available as Starter and Add-On kits
- Up to three lights can link together
- Operated using a remote control
- Brightness can be adjusted
- Velcro tabs on all Kampa AIR awnings from 2016 for easy fitting
- Can be hung in other awnings using the hooks supplied
- 150 super bright LED bulbs - never need replacing
- 5 metre cable (Starter kit)
- 1.2 metre long
- Complete with mains adaptor in Starter Kit (Euro version available)
- S-hooks included for other awnings and tents
- Optional 12V adapter available (LG1039)

Carpets designed to fit your awning

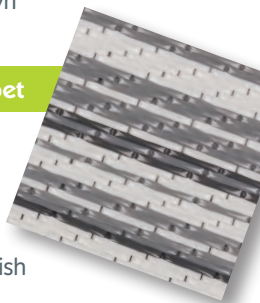

Luxury,
breathable
carpets
available for
every model

Key Features of Kampa Carpets

- Breathable fabric ensures that underlying grass is not killed
- Close-weave allows air to circulate whilst stopping insects, worms and worm casts from coming through
- Exceptionally hardwearing, rot proof and UV stabilised
- Easy to clean - just hose down

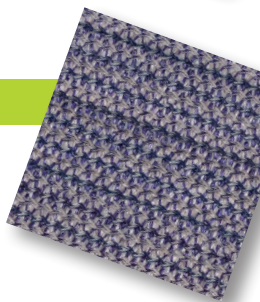

Continental Cushioned Carpet

- Heavy duty but lightweight
- Attractive striped weave in contemporary colours to complement your awning
- Warm, cushioned non-slip finish
- Very easy to fold
- Complete with carry bag

Easy Tread Carpet

- Hard-wearing
- Attractive two-tone weave
- Warm, non-slip finish
- Hemmed for extra strength
- Complete with carry bag

Pro Windbreak specification

- **'Feel the Difference'** double coated Weathershield™ Pro polyester
- Flame retardant and UV stabilised
- Adjustable steel support poles, no need for guy lines
- Comes with strong carry bag and pegs
- Crystal Clear horizontal panel

Pro Windbreak

Quick and easy to set up the Pro Windbreak gives you vital protection from the wind. Made in the same Pro material as our Pro awnings it is quick to set up and is supported with adjustable support bars. The windbreak provides a level of privacy but the Crystal Clear transparent panels mean that you're not cut off completely.

Model	Height	Length	Pack Size cm	Weight
Pro Windbreak - 3 Panel	142 cm	460 cm	100 x 13 x 13	10.5 kg
Pro Windbreak - 5 Panel	142cm	765 cm	100 x 15 x 15	16 kg

Personalise your awning with this great range of optional equipment

Monsoon Poles

Designed to fit our framed awnings, the Monsoon Pole adds extra tensioning for the roof panels; particularly useful in wet weather. Supplied as a complete aluminium set for the Ace. ▼

Packing Pads

Fills the gap between the air poles and the caravan to create a tauter roof and help shed water. Supplied in packs of eight. Use as many as required. ▼

Storm Tie Down Kit

◀ All our lightweight awnings come ready fitted with attachments to accept our Storm Tie Down Kit. If you're expecting particularly windy weather these will assist the guy lines already fitted to the awning. Supplied in pairs complete with large pegs.

Hanging Rail

Provides vital hanging space for towels, jackets and clothing. Ideal for use with our optional Jack Hanger (shown). The rail simply clips to the connection in the awning and to the front pole. ▶

Rear Upright Poles

All our awnings come complete with sewn in bumper pads that create a seal between the awning and caravan. The seal can be enhanced by using one of our Rear Upright Pole Sets. Steel or aluminium sets available. ▶

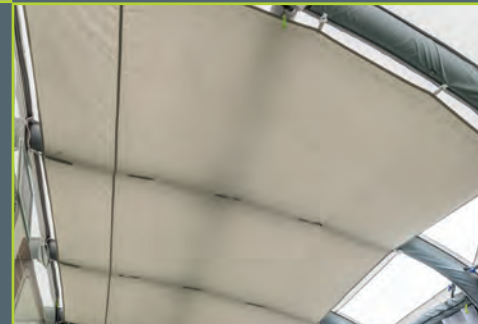

Inner Tents

◀ Add sleeping accommodation to your awning. Available for selected models across the range.

Roof Linings

A fantastic accessory available for most of our Pro and Expert range. Simply clips in - Insulates the roof ▶ making the awning cooler in hot weather and warmer in the cold.

LIMPET™ Patent Pending

Limpet™ Fix System

An ingenious way of attaching the rear wall of your awning to your caravan, most Kampa AIR awnings come Limpet™ Fix Ready. Simply attach the Limpet through the pre-cut holes in the rear of the awning and fasten to a smooth caravan surface. There are four holes each side of the awning. Limpets come in a pack of eight. Extra holes, to suit your caravan, can be made using the Kampa Limpet Hole Punch.

Wheel Arch Covers

Available in single and double sizes. Includes storage pockets. Simple to fit using the Limpet™ Fix System.

AccessoryTrack™ Organiser

There's never enough storage space in an awning so this handy organiser is perfect for smaller items helping keep your awning tidier and your essential holiday items easier to find. The organiser simply slides onto the AccessoryTrack™ on selected models.

NEW

Mesh Panel Sets

Ideal for warm weather to keep insects out and provide shade but still allow air to flow through to keep you cool. Each panel simply zips into the front of your awning. Those on the Rally AIR Pro and Rally AIR Pro Plus zip in behind the front panels and can remain in place. On the Ace AIR Pro and Classic AIR Expert the mesh panels replace the awning's front panels. Available as complete sets (up to three panels) for use on Rally AIR Pro, Rally AIR Pro Plus, Ace AIR Pro and Classic AIR Expert awnings.

AccessoryTrack™ Hanging Rail

Attaches to the AccessoryTrack™ on some of our awnings. Provides essential hanging space and can be used with our Jack Hanger to provide hooks (as shown).

12V Electric Pump

12V electric pump designed specifically for use with Kampa AIR awnings and tents. Simply plug into a 12V power source using the extra long cable, set the PSI required and let the pump take care of the rest.

Genuine Kampa furniture - a perfect match for your awning

The Firenze range

A range of extremely comfortable relaxers with a clean, classic look in padded hard-wearing 600D polyester.

Comfort
6 position backrest.
Steel frame.
Load capacity: 150Kg.
